

The “Search and Rescue” activity can be applied to any topic that can be reviewed with a single question and single answer. The questions go on the inside of the posters, while the answers go on the outside.

Student Expectations (should be displayed on a poster or on the board while students work):

Maximum of 3 students working together. (May be more if class size > 30.)

Maximum of 3 students beginning at the same poster. (Again, may be more.)

Show all work.

Share your thought processes, not just answers.

To prepare students for this activity, their warm-up should be a review problem similar to those they will see on the posters. For this activity, I have included a table reviewing the different types of sequences and the general forms of their recursive and explicit formulas.

# Recording Sheet – Algebra 1

## SEARCH AND RESCUE!

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Example/Reference Sheet:

Type of Sequence	Recursive Formula	Explicit Formula
<p style="text-align: center;"><b>Arithmetic</b></p> <p>Have a common difference,  <math>=</math> _____</p>	<p style="text-align: center;">Given _____,  <math>a_n = a_{n-1} + d</math></p>	<p style="text-align: center;"><math>a_n = a_1 + d(n-1)</math></p>
<p style="text-align: center;"><b>Geometric</b></p> <p>Have a common ratio = _____</p>	<p style="text-align: center;">Given _____,  <math>=</math> _____<math>\cdot</math></p>	<p style="text-align: center;"><math>a_n = a_1 \cdot r^{n-1}</math></p>

Problem #	What are you given?	Shown work	Answer

1

!

Handwritten scribbles and symbols including a large 'o', a dot, and a double exclamation mark '!!'.

3
