INTRODUCTION

The West Contra Costa Unified School District has contracted with Davis Demographics & Planning, Inc. (DDP) to update and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes: mapping the District, address matching the current student file, developing and researching pertinent demographic data, identifying future residential developm

EXECUTIVE SUMMARY

Davis Demographics & Planning, Inc. (DDP) is assisting the West Contra Costa Unified School District (District) to plan for future student population changes. As part of this effort, the District requested a 10 year forecast through fall 2018/19. This report contains the results of this student population study. Factors such as current and historical student data trends, birth trends and estimates, as well as planned residential development have been taken into consideration.

It is important to remember that this projection is based upon residence of the current and future students as opposed to actual enrollment at each campus and is designed to alert the District as to when and where student population shifts will occur. For a detailed accounting of the enrollment at each school along with insight into the current inter-district and intra-district transfer patterns, please review the attendance matrix (**Section Three – Attendance Matrices**).

The W.C.C.U.S.D. experienced growth in the late 1990s and early 2000s due to previous increases in elementary school enrollment caused by increased births in the 1980's. After continued decline in births from 1990 to 1997 elementary school enrollment had stabilized in the late 1990s and started to decline after 2002. Consequently, the W.C.C.U.S.D. has experienced declining enrollment as the larger classes currently in the system graduate and are replaced by smaller incoming classes. Births in the district have shown a slight increase and stabilization after 1998 (2003s K class). As the students from the recent birth matriculate through the system we may see an increase in elementary level student population and eventual increases at the secondary level.

The overall K-6 resident student population in the W.C.C.U.S.D. is expected to decline slightly over the 10-year projection timeframe. Currently the K-6 resident student population of 16,789 may decrease to as low as 16,658 but, for the most part will stay within 50 students (plus or minus) of the of the 2008/09 count. Most of the individual attendance area projected resident student counts will stay fairly stable to the current number of resident students. However, a few areas may see an increase or decreases due variations in the current kindergarten class size.

The Coronado E.S. and the Madera E.S. attendance areas had larger than usual kindergarten classes for 08/09. If this trend continues (it most likely will in the Madera area) we can expect an increase in the K-6 resident student population. Conversely the Chavez E.S, Ford E.S., Grant E.S. and Nystrom E.S. attendance areas experienced a smaller than usual kindergarten class for 08/09. This trend may lead to a decrease in the resident student population. A decline in resident students may also occur in the Lincoln E.S. attendance area due to large upper grade classes graduating and being replaced by smaller lower grade classes.

The overall 7-8 resident student population in the W.C.C.U.S.D. is expected to remain very stable over the 10-year projection timeframe. Currently the 7-8 resident student population is 4,169 and should continue to be around the 4,200 level in the projection timeframe. The only exception is in the 2014/15 school year when the 7-8 student population may reach a high of 4,339. Most of the individual attendance area projected

METHODOLOGY

1 - SOURCES OF DATA

A - Geographic Map Data

Five geographic data layers were updated for use in the ten-year student population projections:

1. Street Centerline Database
2. Study Areas
3. Schools
4. Students – Historical and Current
5. Future Residential Development

1) Street Centerline Data

DDP has licensed a digital street centerline map of the School District from SANGIS. The street database has associated attributes that contain, but are not limited to, the following fields: full street name, address range and street classification

The main function of the streets is in the geo-coding process of the student data. Each student is address matched to the streets by their given address. The geo-coding process places a point on the map for every student in the exact location of student residence. This enables DDP to analyze the student data in a geographic manner.

Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets and neighborhood streets are used as boundaries for the study areas.

2) Study Areas

Study areas are small geographic areas and the building blocks of a school district; they are similar to neighborhoods. Study areas are geographically defined following logical boundaries of the neighborhood, such as freeways, streets, railroad tracks, rivers, etc. Each study area is then coded with the elementary, junior high and high school that the area is assigned to attend. By gathering information at the study area level, a school district can

b. Current Student Data - A student data file representing the enrollment

development. DDP uses birth data by zip code so, if need be, a different birth factor can be applied to various areas of the District.

Incoming kindergarten classes, for existing homes, are estimated by comparing changes in past births and birthrates. Table 2 shows the total births for each zip code in the West Contra Costa Unified School District from 1994 to 2006. Future kindergarten classes (2009-2018) are estimated by multiplying the existing kindergarten class (2008) by the ratio of the projected year's births to the 2003 births. Assuming that the Fall 2008 kindergarten class was born in 2003, DDP compared the total births in 2003 to the total births in 2004 to determine a factor for next year's kindergarten class (Fall 2009). Similarly, 2003 was compared to 2005 (Fall 2010 K class), 2003 to 2006 (Fall 2011 K class) and 2003 to 2007 (Fall 2012 K class).

DDP used birth data from the zip codes 94530, 94547, 94564, 94801, 94803, 94804, 94805 and 94806. There were 3,281 births in the baseline year of 2003. With the exception of 2005 the subsequent years all show an increase in reported births. This suggests an increase in future kindergarten students compared to the 2008/09 K class enrollment.

Birth Year	El Cerrito 94530	Hercules 94547	Pinole 94564	Richmond 94801	El Sobrante 94803	Richmond 94804	Richmond 94805	San Pablo 94806	Ttl br/yr

Table 2- Birth Data

4) Planned Residential Development –Planned residential development data is collected to determine the number of new residential units that will be built over the ten-year timeframe of the student population projections. The units projected to be built within the next ten years will have the appropriate Student Yield Factor, Table 4, applied to them to determine the number of new students planned residential development will yield.

This data was obtained through discussions with district staff, the major developers within the district boundaries, the local cities planning departments, the planning department of Contra Costa County and various other agencies. A database map of the planned residential development was created, including, when available, project name, location, housing type, total number of units and estimated move-in dates (phasing schedule). Projected phasing is based upon occupancy of the unit and is used to help time the arrival of students from these new developments.

In the student population projection by residence DDP includes all approved and tentative tract maps in addition to any planned or proposed development that possibly will occur within the projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

5) Student Yield Factors – Ten-Year Projections - Closely related to the planned residential development units are Student Yield Factors. The Student Yield Factors, when applied to planned residential development units, determine how many additional students will be generated from new construction within the District.

Table 4- Student Yield Factors

*Note: Student Yield Factors were calculated by Jack Schreder and Associates and given to DDP by the W.C.C.U.S.D staff

DISTRICT WIDE PROJECTION

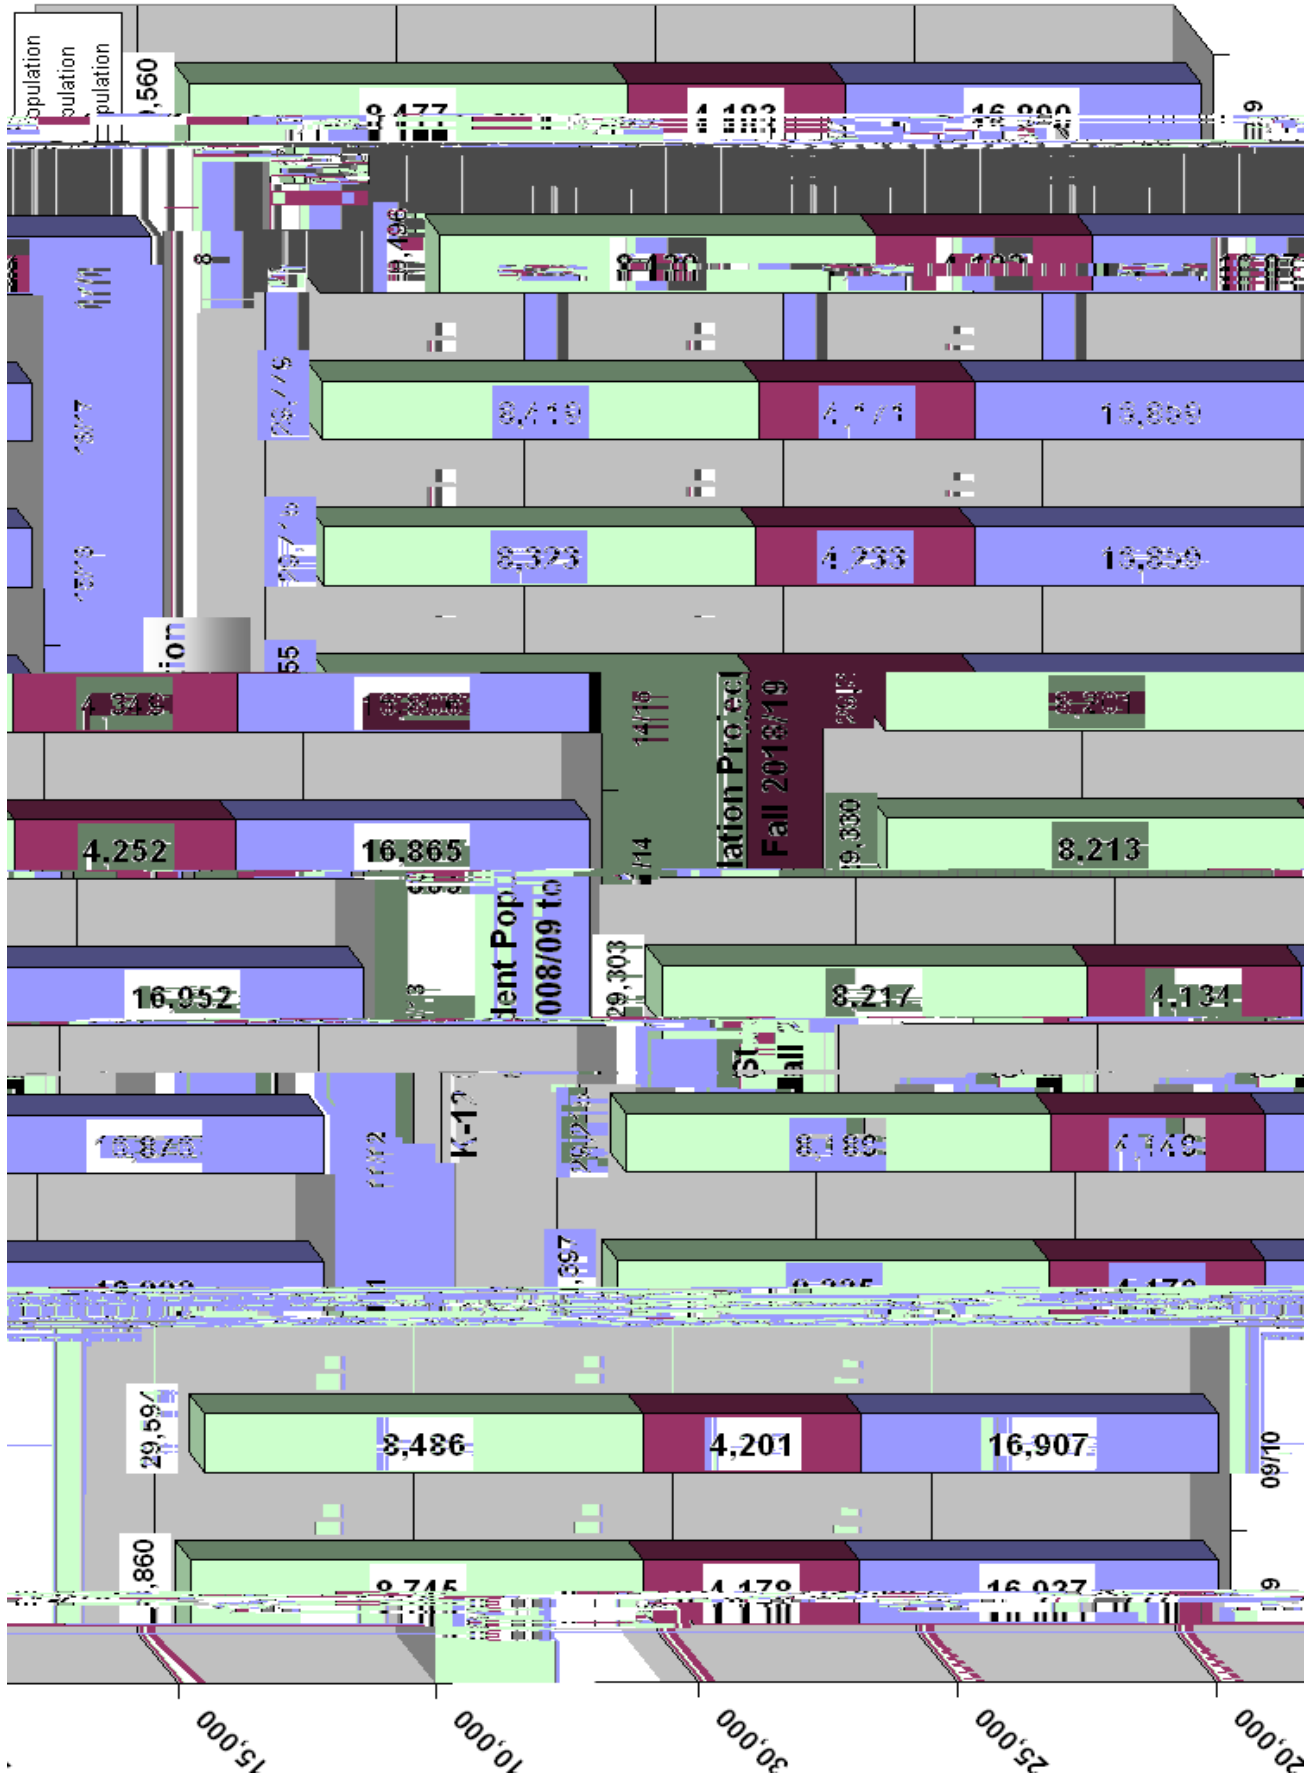

TEN-YEAR PROJECTION SUMMARIES

Finally, the student population is projected out ten years for each of the study areas and for the entire West Contra Costa Unified School District. The District Wide projection summaries enable the District to see a broad overview of future student population and what impact this population will have on existing facilities. The study area listings enable the District to monitor student population growth or decline in smaller geographic areas within the District.

At any point in time, study areas and their projected resident students can be shifted between schools to assist in balancing enrollment changes. Together, these projection summaries present the means to identify the timing of student arrivals and overall facility requirements, as well as location in order to accommodate the District's expected population shift.

ELEMENTARY SCHOOL ATTENDANCE AREA PROJECTIONS

Overview of the Elementary School Attendance Area Projections

The overall K-6 resident student population in the W.C.C.U.S.D. is expected to decline slightly over the 10-year projection timeframe. Currently the K-6 resident student population of 16,789 may decrease to as low as 16,658 but, for the most part will stay within 50 students (plus or minus) of the of the 2008/09 count. Most of the individual attendance area projected resident student counts will stay fairly stable to the current number of resident students. However, a few areas may see an increase or decreases due variations in the current kindergarten class size.

The Coronado E.S. and the Madera E.S. attendance areas had larger than usual kindergarten classes for 08/09. If this trend continues (it most likely will in the Madera area) we can expect an increase in the K-6 resident student population. Conversely the Chavez E.S, Ford E.S., Grant E.S. and Nystrom E.S. attendance areas experienced a smaller than usual kindergarten class for 08/09. This trend may lead to a decrease in the resident student population. A decline in resident students may also occur in the Lincoln E.S. attendance area due to large upper grade classes graduating and being replaced by smaller lower grade classes.

HIGH SCHOOL ATTENDANCE AREA PROJECTIONS

Overview of the High School Attendance Area Projections

The overall 9-12 resident student population in the W.C.C.U.S.D. is expected decline annually until the 2014/15 school year and then increase until the end of the projection timeframe. Currently the 9-12 resident student population of 8,640 may decrease to a low of 8,095 in the 2014/15 school year but is expected to rebound to 8,373 resident students by the 2018/19 school year. This decline is due to relatively larger 9th-12th grade classes being replaced by smaller 5th-8th grade classes.

There is no one trend for the high school attendance areas. The El Cerritos H.S., Hercules H.S. and Kennedy H.S. attendance areas are all projected to increase by the 2018/19 school year. The El Cerritos H.S. area is anticipated to have the largest increase of approximately 130 9-12 resident students. Meanwhile, The DeAnza H.S., Pinole Valley H.S. and Richmond H.S. attendance areas are projected to decline by 2018/19. The Richmond H.S. attendance area is showing a 256 9-12 resident student decrease by the end of the projection time frame.
